

## **The champions: WC Seats made of urea**

What are the important qualities of a champion? Talent, performance and flexibility. No wonder urea is promoted as a material with superb qualities for toilet seats. Duroplastic has definitely won its place on the winner's rostrum: No other material has such outstanding product properties and such a superb "condition".

With its performance urea outcompetes all its rivals. The duroplastic withstands attacks of aggressive cleaning products and disinfectants without a problem – with a resistance which guarantees best hygiene in the bathroom. Moreover this champion among the raw materials for WC seats does not show any traces of use, not even after several years. Dirt-repelling, antistatic, protective against cigarette-burns: Urea reached the top of the winner's rostrum because of these characteristics. A magnificent career: Even after being in use for years the material does not lose its brilliance whereas WC seats made of polyester for example, often get dull so early on.

That is why Hamberger Sanitary trusts urea: Europe's biggest producer of WC seats offers more than 100 designs in various colours, shapes and sizes, made of this high-performance material. "Made in Germany" the Hamberger Sanitary WC seats guarantee top quality standards.

Hamberger Sanitary GmbH in Rosenheim near Munich, Germany, today is the largest manufacturer of WC seats having its production facilities in Germany. The Sanitary Ware division has been manufacturing WC seats made of wood and plastics since 1912, with the development of its own designs and ingenious hinge technology forming the basis of its success. The enterprise which was founded in 1866 is today managed by Peter Hamberger and Dr. Peter M. Hamberger, in the fourth and fifth generations. The export share of the company is over 50%; exports are world-wide into more than 50 countries.
